This print companion to MindTap General Chemistry: Atoms First presents the narrative, figures, tables and example problems—but no graded problems or assessments. Students must use MindTap to complete the interactive activities, exercises, and assignments. The atoms first organization introduces students to atoms and molecules earlier and delays math-intensive problem-solving to later in the semester. This gives students a stronger conceptual framework to help them succeed in the course. In addition, the narrative provides greater emphasis on the historical development of the atomic nature of matter and atomic structure. This volume brings together three areas of interest: the rule-based approach, the entrepreneur, and Japan as an empirical application. It highlights the advantages of the rule-based approach for economic analysis by linking different methodological underpinnings. Using these, the author exemplifies how rule-based economics allows a systematic analysis of the entrepreneur as the key figure in bringing about economic change and diversity. The book includes an empirical methodology for applied research in rule-based economics, which it puts to the test in an empirical study of entrepreneurship in contemporary Japan. The choice of entrepreneurship and Japan showcases the integrative power that rule-based economics brings to further breaking a theoretical deadlock and to analytically capturing a very particular economy investigated very little so far. By offering a body of new and original research, the monograph shows how the idea of entrepreneurship as a rule helps to resolve the Schumpeter-Kirzner divide and to develop an empirical approach to the determinants of entrepreneurial activity.
